

Molded Pulp Packagings

---

## Paper Pulp Molded Egg Tray

An egg tray, egg carton (also known as an egg box) is a tray/carton designed for carrying and transporting whole eggs. Our Egg trays are manufactured from recycled paper and molded pulp.

Egg Trays are usually used to store fresh eggs from farms or at farmers markets. This structure helps protect eggs against stresses exerted during transportation and storage by absorbing a lot of shock and limiting the incidents of fracture to the fragile egg shells.

Compared with traditional plastic egg tray, paper moulded pulp egg trays are more eco-friendly and renewable. Each tray holds 30 eggs and will stack one on top of the other by turning each tray opposite the one below. These trays are also ideal for use as Incubator Egg Positioners when holes are cut to permit better circulation of the air. Cracked eggs are practically eliminated when using our egg trays.

**Products:** Molded Pulp 30-cell Egg Tray

**Size:** 295\*295\*50mm

**Raw Material:** 100% recycled paper

**Application:** Egg Packaging

**Color:** Yellow; cardboard color

**Packing:** 70pcs/bag

**Character:** 100% biodegradable disposable.

**OEM:** As Customer's requirements. Logo Available
